INTRODUCTION

Financial infrastructure has started to use reliability, speed, and low-cost blockchain technology with the development of technology. This technology has universal qualifications beyond political and geographical boundaries. Although the use of blockchain technology has become widespread, it is insufficient in many areas. This white paper was created to introduce the Starvip (STV) platform, which sees the gap in many sectors.

The Starvip platform is a highly reliable and low transfer commissions cryptocurrency using the Binance smart chain and etherium blockchain infrastructure, which have been created to be used in international money transfer, internet shopping, and many social media platforms. Starvip platform has been designed to create a strong ecosystem for use in many areas such as shopping online, renting a car, and renting a hotel.

FUTURE PLANS

The primary goal of the Starvip platform is to gain the interest and trust of institutional investors by establishing and strengthening of own ecosystem. The primary purpose of this ecosystem is to carry out the commercial transaction on the internet fast and confidently with very low transaction costs.

An increase in the awareness of the platform by working with the experts in this area is among the significant goals for the Starvip platform to gain an active presence in all social media platforms. High interaction of social media accounts is among our most important goals in the short term.

We are working to support many online events to increase our recognition within the digital world in the long term. Online events will increase the recognition of the Vipstar ecosystem and attract many individual and institutional investors.

HOW STARVIP WORKS

- It offers discounts and low commissions for purchases made through many websites and applications.
- Users who use Starvip coins get their share from the prize pool in the ecosystem.
- After calculating the daily commissions from users using the Starvip platform, 30% is burned, thus the price drop is minimized.
- The number of coins belonging to the Starvip ecosystem is limited to 100 million. After the coin burning process, it is designed to ensure that its price is not damaged by inflation by decreasing the amount of coin supply.

IN THE LONG

TERM

We have been working as a team for the development of the Starvip ecosystem for a long time. We created many medium and long-term plans while forming the platform. As the Starvip team, our most important long-term goal is to ensure system security at the highest level and to provide the Starvip coin transfer between the purchaser and the seller fast and at a low cost.

To increase the number of users by organizing digital events to increase the use of Starvip coin is among the most important plans. This will allow the platform to grow rapidly.

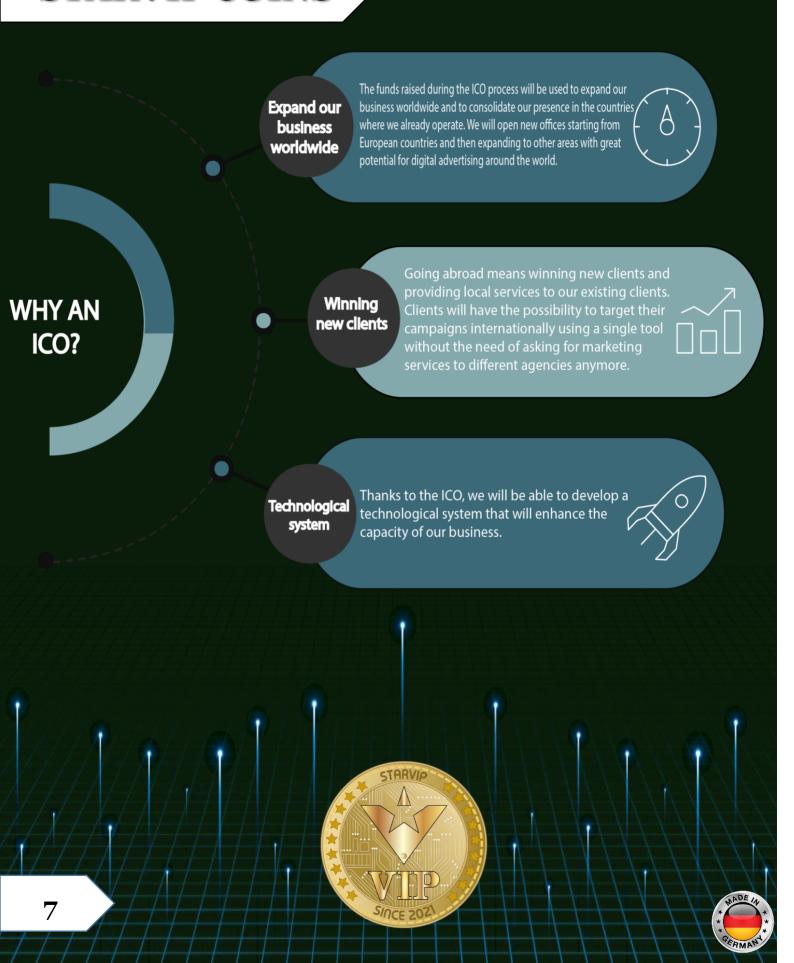

As the Starvip team, our most important long-term planning is to create our infrastructure and make the transfers on this blockchain. After we have switched to our infrastructure, users will be able to earn Starvip coins by mining.

The Vipstar coin is in contact with many central and noncentral cryptocurrency exchanges to be traded at the major exchanges. In the medium and long term, it is continued to work to carry out many procedures to start trading on the top five stock exchanges in the world.

STARVIP

INTRODUCING STARVIP COINS

TOKEN SALE

Token Name	STARVIP COİN
Token Symbol	STV
Maximum Token Offered	100,000,000
Minimum Token Required	30,000,000
Particulars	Binance Smart Chain (BSC) Etherium Based Token (ERC-20)

The locked 70,000,000 STARVIP Tokens will wait as locked. Locked tokens will begin to be traded proportionally within 10 years. Half of the transaction fees will be burned daily. In this way, it is aimed to prevent the inflation of Starvip coins by burning the trading commissions and by keeping a certain amount locked.

BUSINESS MODEL

Starvip ecosystem is a platform created for online shopping and international money transfer. Since its supply is limited, it is also intended to be used as a store of value.

This platform conducts many activities to be used in social media applications. It carries out studies on creating development and partnerships to work integrated into many social media applications. Social media users can perform many activities with Starvip Coin such as transfer money to each other, purchasing digital products, and donating to content producers. The Starvip ecosystem also conducts studies on the activities such as providing Access and transfer money from anywhere by developing mobile software.

Starvip conducts many activities and interviews to make the platform more reliable by making agreements with many financial and technology companies. As a Starvip team, it is of great importance to bring the platform to international awareness in the short and medium-term by taking investments from many companies.
